

Feedbacks

for the book “AI Survival Kit for Computer Engineers” by Nathália de Carvalho Oliveira Cunha Guimarães

- Amanda Canizela: computer engineering student
 - “I found it very well done, with interesting information and very easy to understand! I liked the learning examples (like the copilot) because it's quite useful and really helps a lot in an engineer's life. I think you could just put the links to these help channels to make it easier for the reader and actually get them to access the pages.”
- Talita Justo: computer engineer student
 - “I think the ebook was really interesting, I just didn't like the colors too much. I think the examples were really useful and I liked the reflection about AI in our daily lifes.”
- Rosiane de Carvalho - computer engineer:
 - “I think the ebook was easy to comprehend, and it brings out real useful information that computer engineers really use in their jobs. It's a very good guide to use when navigating on which tool to use and where to search for new information.”
